NewAir I.B.® Express
Inflatable Cushioning System

The versatile, inflatable cushioning system for any packaging operation
The NewAir I.B.® Express System
Patented technology ensures fast, reliable inflatable cushioning

The difference is in the Barrier Bubble® technology
The NewAir I.B.® Express packaging system automatically inflates and dispenses patented Barrier Bubble® cushioning material. The Sealed Air proprietary film technology retains air longer than non-barrier polyethylene air cellular materials and out-performs other materials for cushioning and overall packaging protection.

Save valuable floor space
The NewAir I.B.® Express has a compact footprint (less than 0.6m²) that works well in cellular packaging environments. The compact design fits comfortably on a tabletop, or can be mounted on a table-side stand. A single film roll can equal 456m² of extra large bubble material, creating on-demand packaging that saves storage space and handling.

Unmatched cushioning properties
Designed to withstand the rigors of today’s global shipping environments, NewAir I.B.® inflatable cushioning material maintains its excellent cushioning properties throughout the entire shipping cycle.

System accessories for every configuration
The NewAir I.B.® Express is supported by a large array of system accessories, making it flexible enough to be used in any and every packaging operation.

Tiny footprint, enormous production
The NewAir I.B.® Express inflatable cushioning system from Sealed Air quickly produces inflatable cushioning, in 300mm and 600mm film widths, at speeds up to 20 metres per minute – fast enough to keep up with the most demanding packaging operations. The small footprint and variety of batching, delivery and converting options make the NewAir I.B.® Express system the perfect fit in almost any packaging environment.

The right material for your application
With the NewAir I.B.® Express system, you can customise the cushioning output. Choose between two different film widths, 300mm and 600mm, and a variety of regular and premium film options.*

* Pre-Inflated film widths 400mm and 800mm, Inflated film widths 300mm and 600mm.

SystemStand and Roll Winder
With the optional Roll Winder attachment, the NewAir I.B.® Express system can create a 900mm roll of material in under three minutes, for decentralised packaging environments.

Instasheeter™ converting system
At the touch of a footswitch, the Instasheeter™ converting system cuts custom sheets of NewAir I.B.® material that provide excellent cushioning or blocking and bracing.
